Ausgangszustand

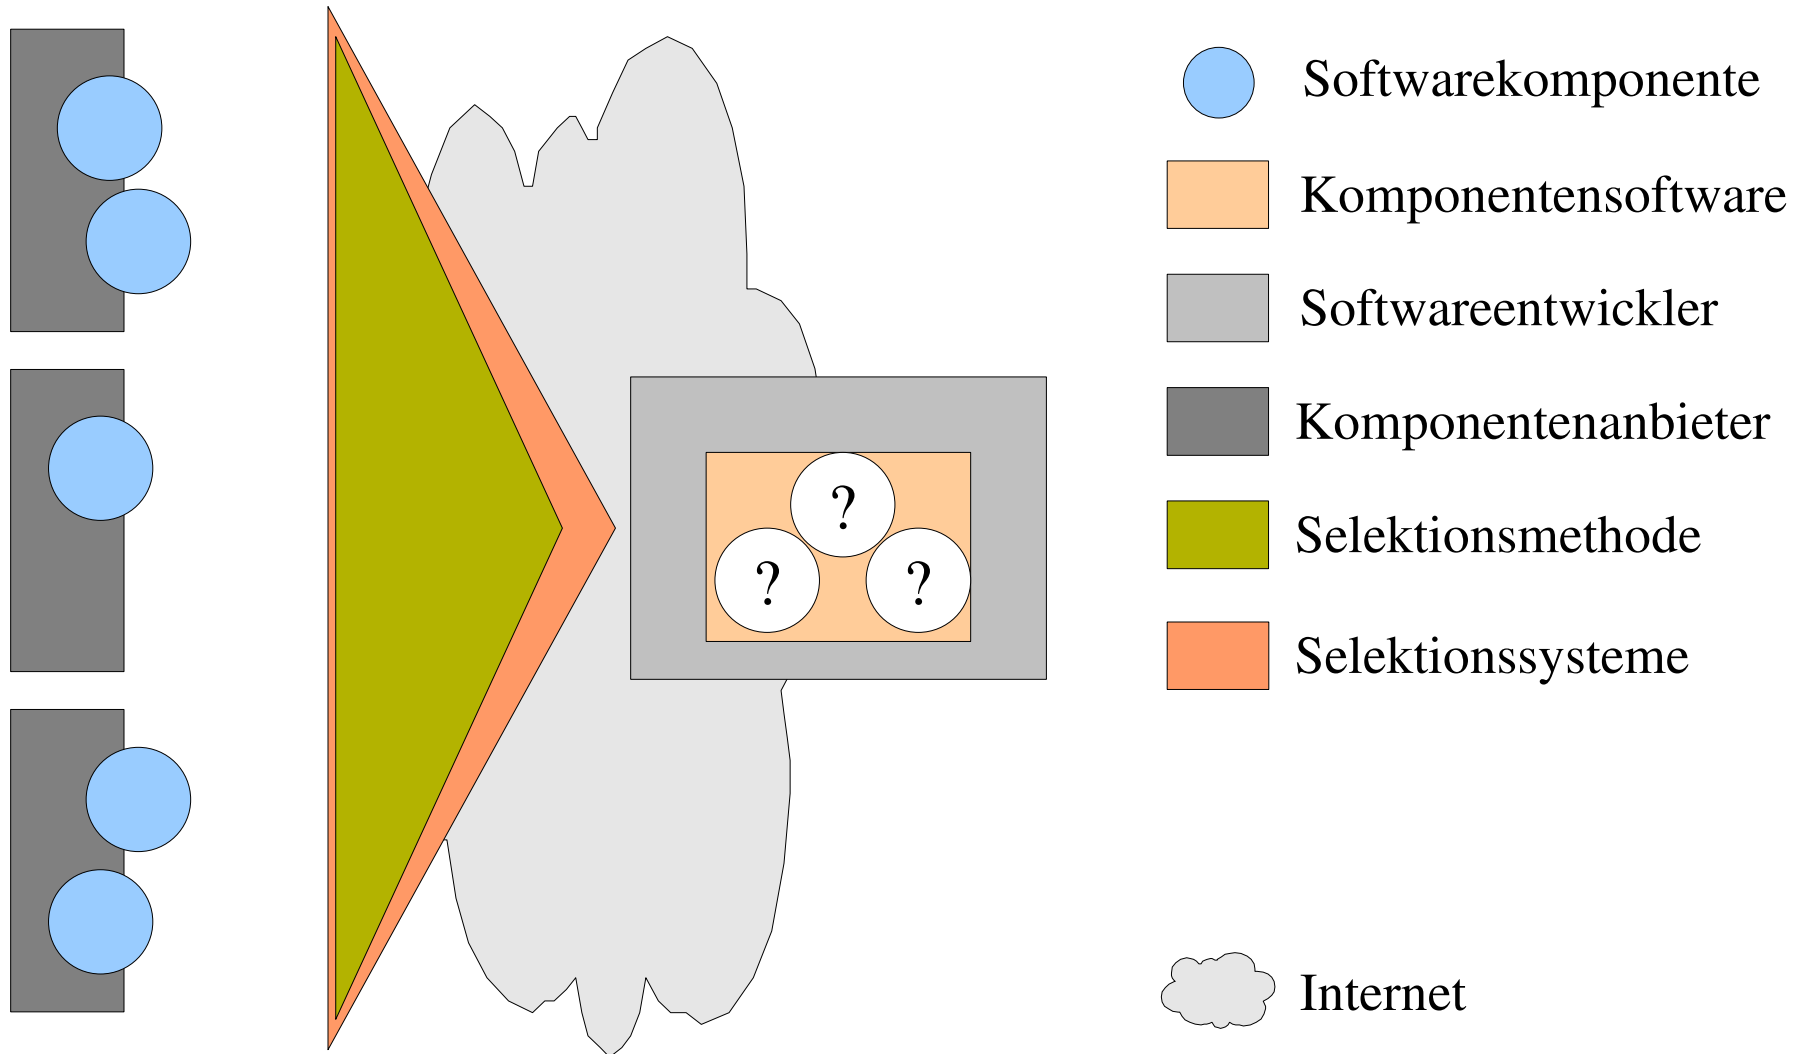

[...] the selection process typically is not defined, each project finds its own approach to it, often under schedule pressure, and there are no mechanisms to learn from previous selection cases. *Jyrki Kontio, 1995*

Selektionsunterstützende Methoden

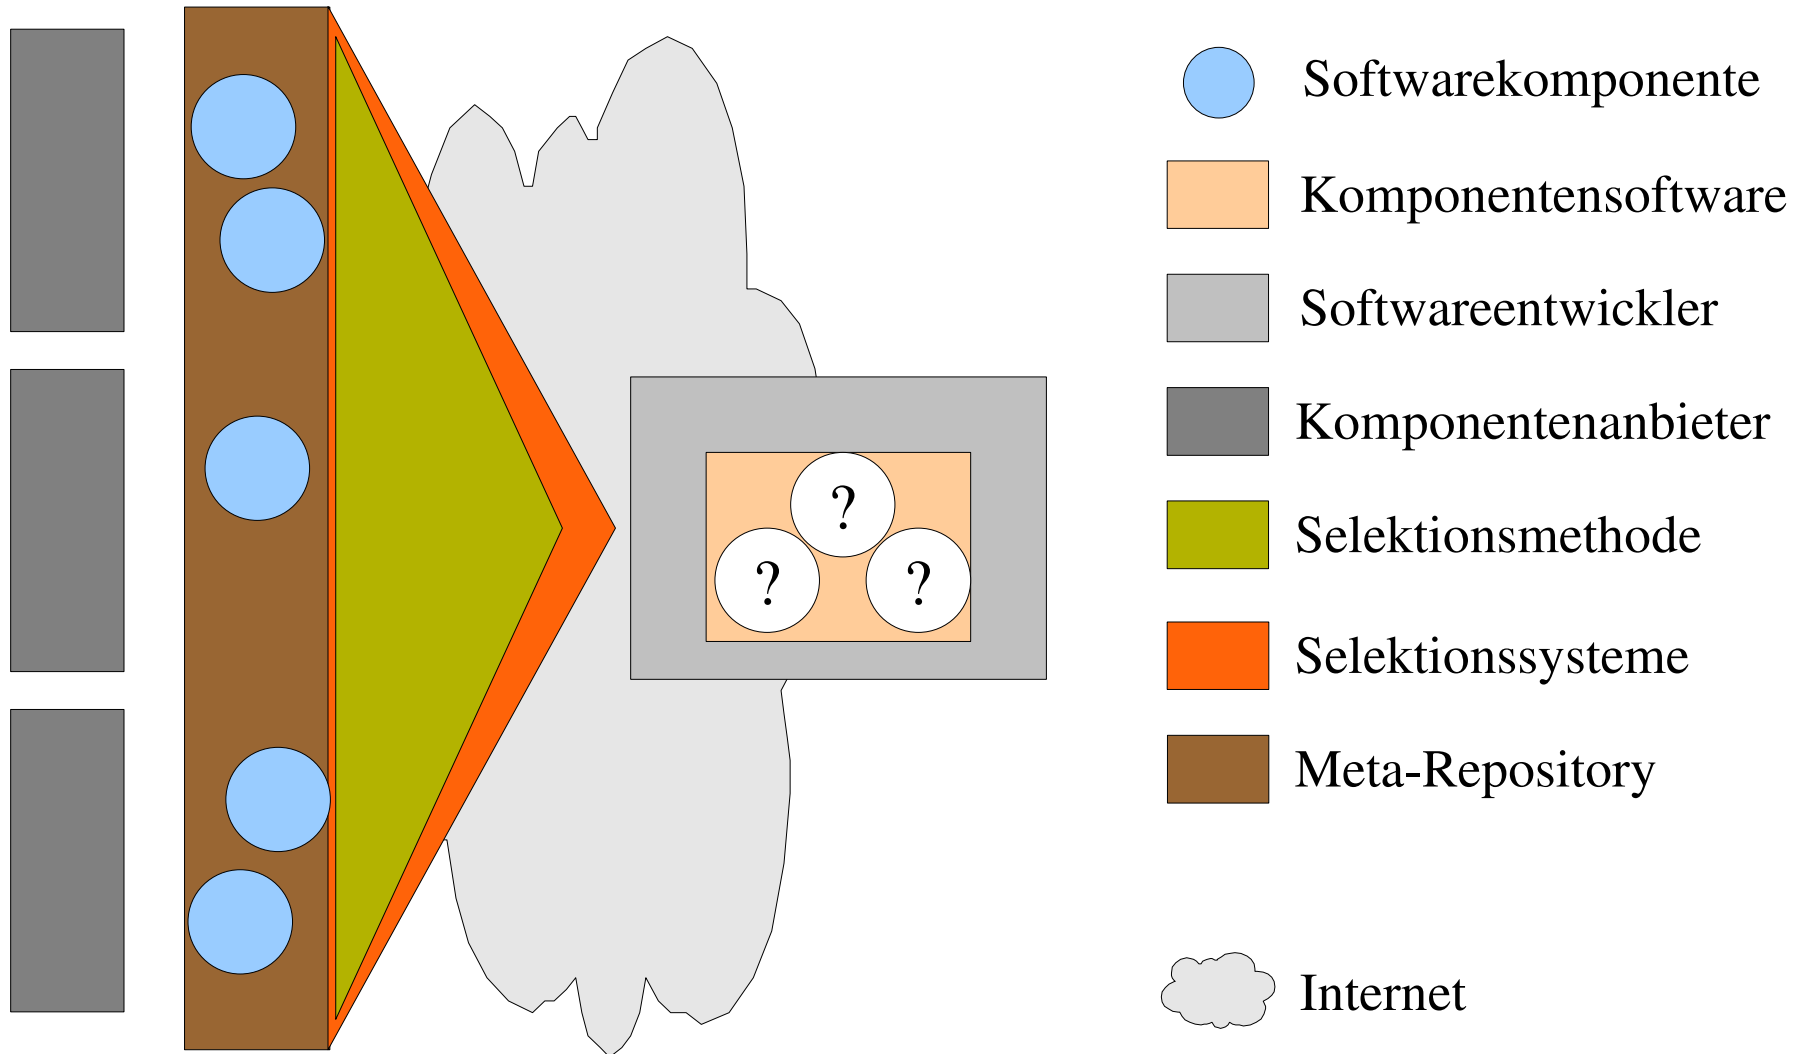

(CBSE) requires a robust decision support model [...] that is supported by a well established knowledge-base that includes stakeholders' experiences as well as up-to-date relevant knowledge. *Mohamed et al., 2004*

Selektionsunterstützende Systeme

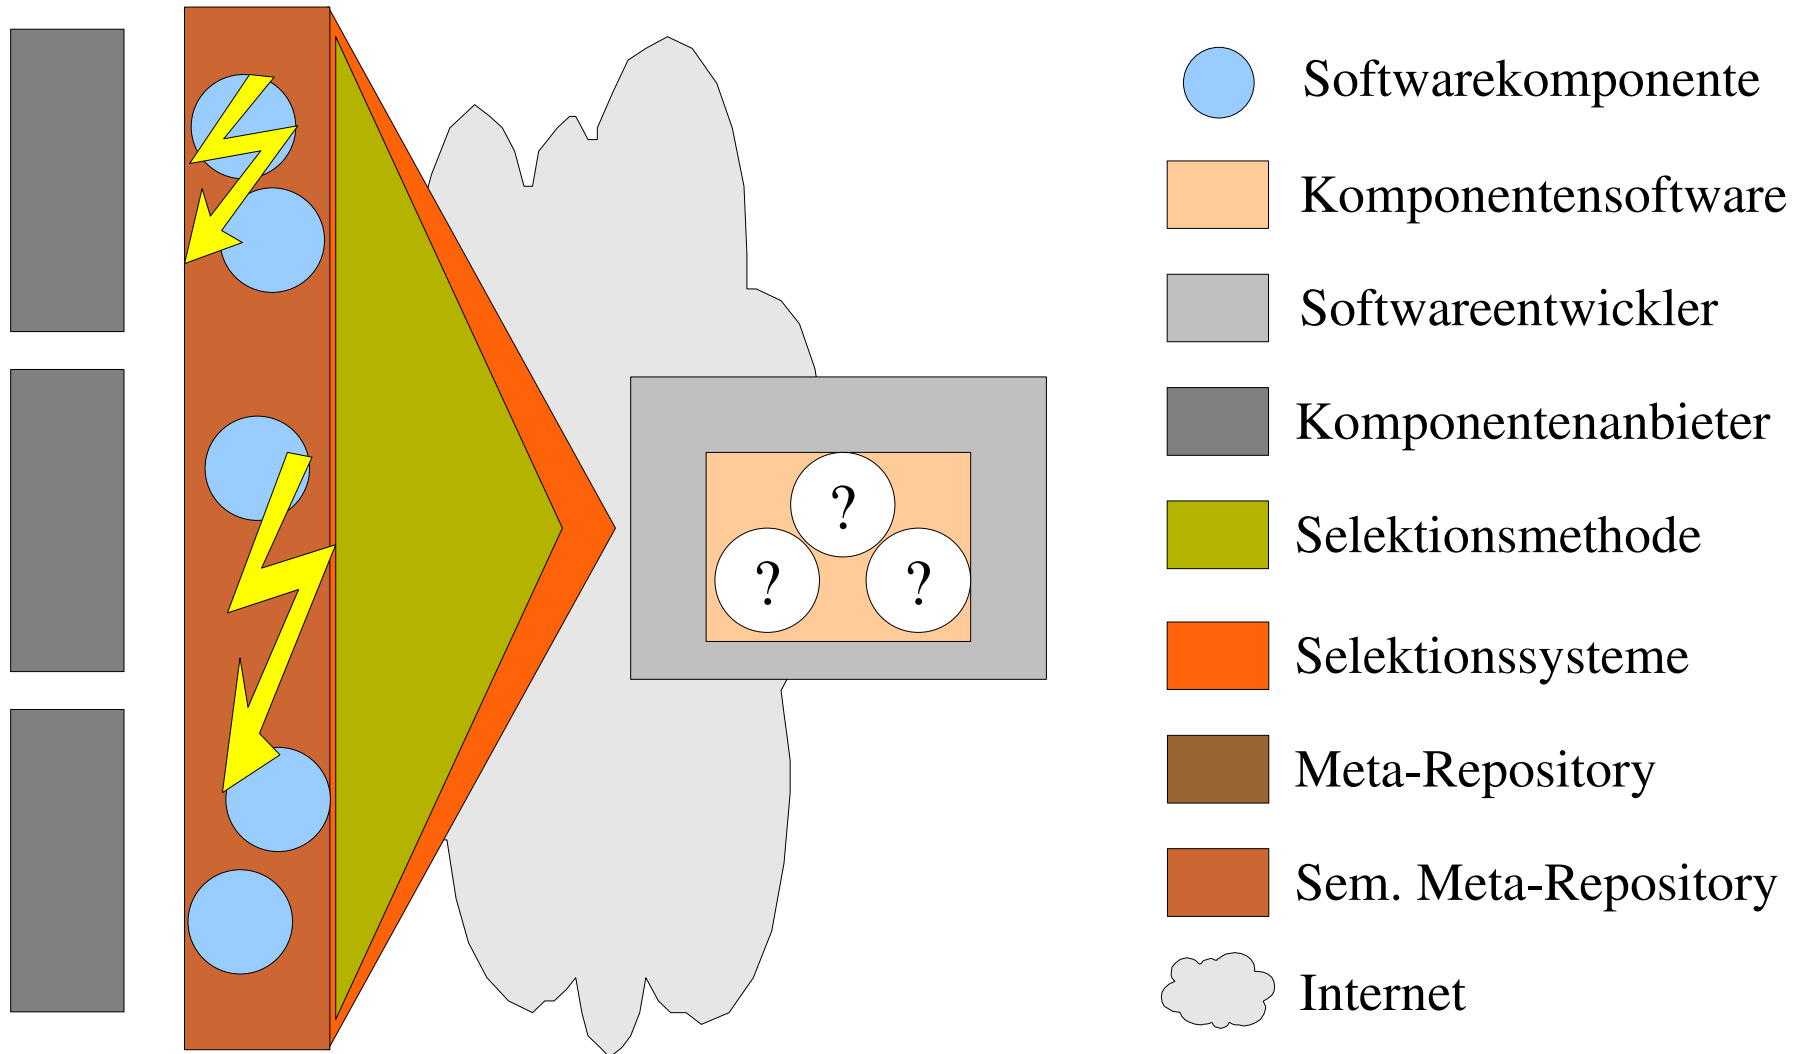

Many organizations fail [...] due to high start-up costs of populating a repository of reusable information and inadequate tools for storing the OTS knowledge and lessons learned. *Aaslund/Larsen, 2007*

Repositories für Software-Artefakte

Finding and selecting components will quickly become too complex to be performed manually, especially for larger systems. *Hartig/Kost/Freytag, 2008*
